

Editorial

We are happy to come up with the June issue of Current Indian Eye Research 2021. The research work throughout the world is severely affected due to ongoing covid pandemic. In this issue, we have an interesting original article highlighting risk factors for retinopathy of prematurity among preterm infants. Infectious keratitis is a leading cause of corneal morbidity worldwide. We have an interesting case report on mixed bacterial keratitis mimicking as mycotic keratitis. This issue also has an interesting case report on drug induced crystalline keratopathy. We also have an old entity of optic neuritis revisited again in the form of a brief communication.
